

# *Welcome to COSC 123!*

---

Firas Moosvi

Lecturer

University of British Columbia  
Okanagan

## Biography

I am a Lecturer in the Computer Science, Mathematics, Physics, and Statistics department at the University of British Columbia Okanagan. I received my PhD in Physics from the Reinsberg lab in 2019 where among other things, I developed a new MRI technique to assess the oxygenation status of tumours using independent component analysis (ICA). During my PhD I got interested in data science, learning analytics, and science communication and that led me to learn more about statistical techniques such as ICA, and data visualization using interactive dashboards.

### Interests

- Magnetic Resonance Imaging
- Tumour biology and physics
- Data visualization and science communication
- Learning analytics
- Scholarship of Teaching and Learning

### Education

-  PhD in Medical Physics, 2019  
University of British Columbia
-  MSc in Medical Biophysics, 2012  
University of Toronto
-  BSc in Biophysics, 2009  
University of British Columbia

# Research Interests

## Research Interests

### Learning Technologies

Use of learning technologies to enhance teaching and learning.

### Active Learning

A learning method that de-emphasizes didactic teaching and actively engages students with material via problem solving, case studies, role plays and other methods.

### Learning Analytics

Extracting trends from learner data using analytical tools to improve learning.

### Equity in STEM

Developing and implementing methods of inclusive teaching to reduce systemic inequities in STEM education.

### Visualizations

Representing data using effective graphs, plots, and other special visualizations.

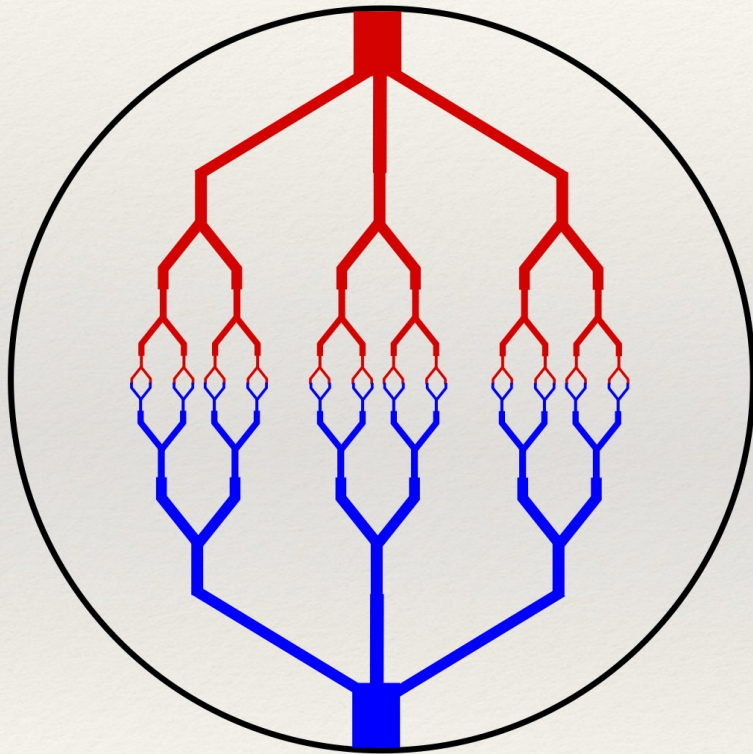

### Alternative Grading

Challenging the systems and structures associated with traditional grading in higher education.

## Implications of abnormal tumour vasculature

### Normal blood vessels

### Tumour vessels

- ▶ Hypoxic and acidic environments significantly affect treatment and progression of cancer
- ▶ Abnormal perfusion patterns in the tumour limits delivery of drugs to target regions
- ▶ This necessitates higher doses that increases toxicity

## Optical Frequency Domain Imaging (OFDI)

- ◆ Anaesthetized mouse brain imaged through **cranial windows** using optical imaging techniques
- ◆ Vessel colour encodes **depth**; closer vessels are yellow and further vessels are red
- ◆ Note the normal brain vascular branching patterns in quadrants I, II, and III compared to the chaotic network of the **U87 tumour** in quadrant IV

# *Credits and Acknowledgements*

---

This course was originally created by Dr. Ramon Lawrence, a Professor in the CMPS department.

Since then, Dr. Abdallah Mohammed and various other folks have taught this course and made iterative improvements.

Many thanks to Drs. Ramon Lawrence and Abdallah Mohammed for creating the course notes, which we will instead of a “textbook” in this course.

# *The Essence of the Course*

---

If you walk out of this course with nothing else you should:

**Become a sophisticated user by understanding the basic skills and concepts of Information Technology.**

**This course is more than using apps and Office!**

We will answer questions like:

- ◆ How does the **computer** and the **Internet** work?
- ◆ What is a **program**? How do I tell the computer what to do?
- ◆ What are the social challenges of an information society?
- ◆ How do I become a life-long productive IT user?

This course shows how **technology works**, the **fundamentals of IT**, and how to **think (and create) differently**.

# Technology is For Everyone

---

It does not matter what discipline you are studying or what job you get in the future, technology is a critical part of your life.

- ◆ **Business:** sales and marketing data analysis and planning
- ◆ **Science:** modern science requires computational **experiments**
- ◆ **Arts:** digital and artistic **creativity**, global and social impacts
- ◆ **Life:** Can you live without your phone or the Internet? Can you imagine the technologies in the next 20 years?

Beyond the technology, this course will encourage you to think differently by learning how to **communicate precisely**, **think critically**, and **problem solve algorithmically**.

---

***CLICKER QUESTION 1.1***  
***(ON SLIDO)***

# Course Objectives

---

- 1) To understand common **computer terminology**
- 2) To learn the **basics of networking and Internet applications**
- 3) To be exposed to the fundamental concepts of **information representation, abstraction, and algorithmic thinking**
- 4) To try **simple programming** by creating web sites in **HTML** and **JavaScript**
- 5) To use word processors, **spreadsheets**, and **databases** to manipulate, document, and analyze information
- 6) To appreciate the role and effect of IT in society

# Why this Course is Important

---

This course is designed to introduce the fundamental skills and concepts of Information Technology. You will learn to become a sophisticated user that is knowledgeable about how the technology you use works.

Important results:

- ◆ **Office Software Proficiency** – Every person needs to know how to use **basic office software** (editors, spreadsheets, and databases). We will cover these fundamental skills.
- ◆ **The Internet and You** – We will learn the basics of Internet **terminology, how it works, and how it affects you.**
- ◆ **Web Development** – We will **build simple web sites** using HTML and JavaScript.
- ◆ **Deeper Understanding** – We will see **how technology works** and appreciate the awesome capabilities, challenges, and opportunities in Information Technology.

# *The Course Syllabus and Website*

---

It is important that all student carefully read the course **syllabus** and regularly check the course website.

Let's have a look!

2021S2

# *The Unsyllabus*

---

---

## **Document Status**

---

**Syllabus** University-mandated, like a legal contract and contains university rules about conduct and behaviour; elements will not change.

---

**Unsyllabus** Living document, responsive to student feedback and adaptable to circumstances; elements may change, usually to the benefit of students and of learning.

# The Unsyllabus

## Teaching Team

Information about the teaching team and how to contact us.

## Course Schedule

A table of course topics and a week-by-week plan of what we intend to cover.

## Doing Well

Strategies and tips on how to do well in this course.

## Getting Help

Learn how to get help and get support if you're struggling, academically or otherwise.

## Evaluation

Information about the grading system and evaluation scheme for this course.

## Teaching Philosophy

How this course will be taught and how humans learn (you may be surprised!).

## Changes

List of changes made to the Unsyllabus since the start of term, and a rationale.

## Honesty & Integrity

Completing this course with honesty and integrity. Examples of things you can and should not not do.

## Special Days

What to do if you have to miss things because of special days (including getting sick).

# Course Evaluation

## Evaluation

The grading scheme for this course is:

Item	Weight	Due date(s)
Learning Logs	10% (10 x 1%)	Saturdays at 6 PM
Tests	20% (5 x 4%)	Fridays during class
Labs	50% (10 x 5%)	Fridays at 6 PM
Final Exam (TBD)	20%	TBD (during the exam period)

### Caution

There will be 5 tests in this course in an (approximately) bi-weekly schedule. For each of the tests, there will be a bonus test one week later and the better score of the Test-Bonus Test pair will be taken. Tests will be held during class on Friday afternoon during class.

Hello everyone!

1 We will be using Ed Discussion for our class Q&A, it's really great! I hope you like it.

This is the best place to ask questions about the course, whether about content, or logistics. You should ask every question here, and the only thing you need to decide is whether your question should be public (helps everyone) or private (applies only to you, for e.g., regrade requests, personal circumstances etc...)

You will get faster answers here from the teaching team as well as other students here on Ed Discussion - all of your TAs are on here as well. Neither TAs nor instructors will be responding to emails or Canvas messages, unless it's a legitimate emergency.

At various points in the course, I will give you some tips and suggestions on how to more effectively ask for, and give help.

Here are some tips:

- Do a quick scan to search before you post, it's possible your question was already asked. If it has, add a response to it, rather than creating a new question
- Click the heart emoji for questions and answers you find/found useful
- Try to answer questions you feel comfortable answering and just try your best! If it's not quite correct, TAs and instructors will be offering helpful edits and corrections. This will be a learning experience as well.
- For each questions that were answered by students (high recommended!), the first answer that we think is fully correct, we will "Endorse" it - this means that the answer was approved by an instructor
- Share interesting course related content with staff and peers - ask lots of questions and let's build a community together!

Here is a quick overview of the main features of Ed Discussion:

## 1. Interface

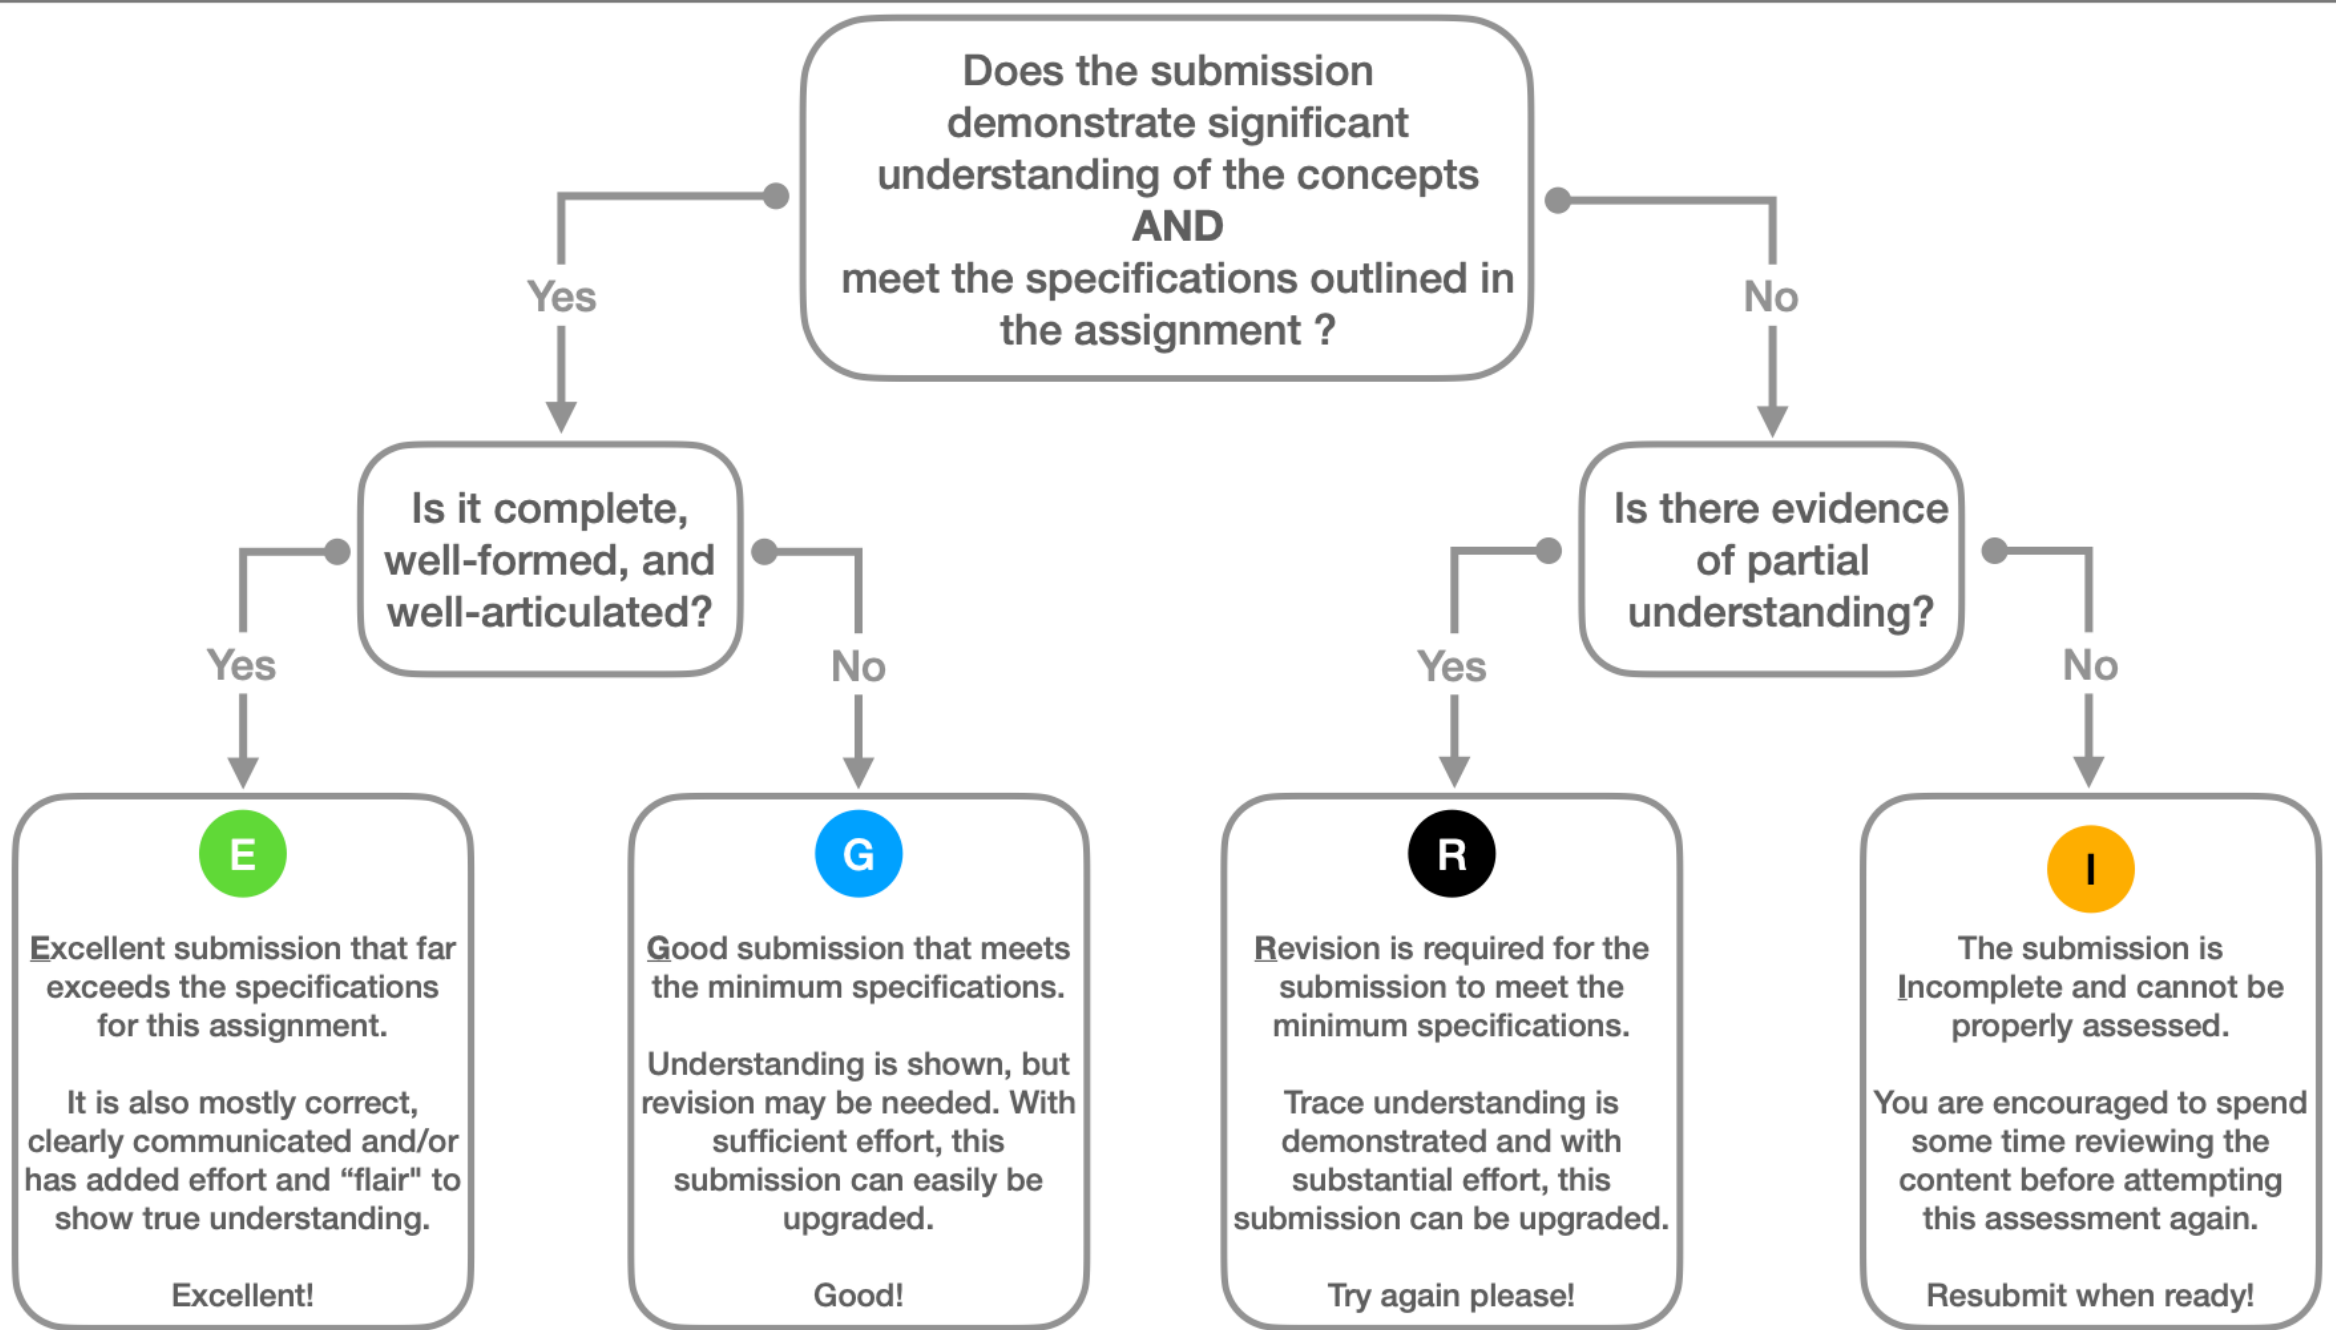

# Specifications-Grading

Many of you are familiar with the “Traditional Grading” model many courses use. Briefly, this model involves earning (or losing) points on individual assessments throughout the course, and then a grade calculated by doing a “weighted-average” throughout the term.

You may be surprised to learn that this is not the only way classes can be structured, and there are alternative models that research has shown to be far better for learning, motivation, attitudes, and long-term benefit. If you’re interested in learning more details about the last sentence (and if it surprises you), I encourage you to [check out this very accessible paper](#) from Drs. Schinske and Tanner [2014].

I am not quite ready to fully move away from Traditional Grading yet (mostly because of a lack of resources, otherwise I’m totally all-in!) but I’d like to experiment with a modified version of Specifications-Grading this term. Here are some [key features](#) of Specifications Grading:

- Each assignment is accompanied with a clear list of “specifications” of what constitutes acceptable work at each level.
- Assignments are marked based on whether students have met each of the specifications for that assignment.
- Students are given opportunities to revise their work to demonstrate their learning.

# How to Pass This Course

---

The most important things to do to pass this course:

- ◆ **Attend class**

- Read notes *before* class as preparation and try the questions.

- ◆ **Attend the labs and do all lab assignments**

- Labs are for marks and are practice to learn the material for the exams.

To get an “A” in this course do all the above plus:

- ◆ **Practice programming and working with applications.**

- ◆ **Do more questions than in the labs. Practice makes perfect.**

# Resources!

---

**Instructor**

**Teaching assistants – Labs and Assignments**

**Lecture Notes**

**Course website and Blackboard (including a discussion forum)**

- ◆ All course materials are included in the lecture notes. The notes will be published on the course website and on Canvas.
- ◆ A text book is *not required* although the notes are based on the following textbooks:
  - Lawrence Snyder, Fluency with Information Technology – Skills, Concepts, & Capabilities, Pearson, 4th edition, ISBN 978-0-13-609182-0, 2011 or 5th edition, ISBN 978-0-13-382893-6.

# Expectations

---

I expect that you to try and **SHOW UP TO CLASS AND LABS** and spend the effort to learn the material.

Although this class may be “easy” for some, you will not pass this class without effort and **attendance**.

◆ Previous: Avg. mark attending class = 75%, not attending=40%

The course will be very straightforward – If you do the work, you will do well. Some labs teach material on Windows and Microsoft Office, but the web development labs (HTML and JavaScript) will require you to think and work.
