

CPSC 100

Computational Thinking

Internet

Instructor: Firas Moosvi
Department of Computer Science
University of British Columbia

Agenda

- AR/VR Demo Video
- HCI Usability Components
- HCI Usability Heuristics

Learning Goals

After this **today's lecture**, you should be able to:

- **Understand** and describe the **first five usability heuristics** proposed by Jakob Nielsen.
- **Explain why** each heuristic is important in designing usable systems.
- **Illustrate** how each heuristic appears (or is violated) in real-world interfaces using provided examples.
- **Compare and contrast** different heuristics using concrete UI examples to determine which are adhered to or violated.

-

WHAT I THOUGHT I NEEDED TO KNOW TO GET STARTED

THE TRUTH

LIZ FOSSLIE

AR + VR

Augmented + Virtual Reality

Virtual Reality (VR)

- Use of computers to simulate a real or imagined environment
- Three-dimensional (3-D) space

Meta Quest 2019-now

Augmented Reality (AR)

- Uses an image of an actual place or things that adds digital information to it

Google Glass 2014-15

Augmented + Virtual Reality

T

Participation Question

How do you feel about Meta's AR glasses?

Net positive for society

Net negative for society

It's complicated...

How do we *design* for the future?

HCI: User Centered Design

HCI: Usability

- Quality attribute
 - Assesses how easy user interfaces are to use
 - Improving ease-of-use during the design process
- Defined by 5 quality components

HCI: Usability Components

1. Learnability
2. Efficiency
3. Memorability
4. Errors
5. Satisfaction

HCI: Usability Components

- **Learnability:**
 - How easy is it to learn task the first time?

HCI: Usability Components

- **Learnability:**
 - How easy is it to learn task the first time?
- **Efficiency:**
 - How quickly can tasks be done (post-learning)?

HCI: Usability Components

- **Learnability:**
 - How easy is it to learn task the first time?
- **Efficiency:**
 - How quickly can tasks be done (post-learning)?
- **Memorability:**
 - How easy is it to re-establish proficiency after being away?

HCI: Usability Components

- **Learnability:**
 - How easy is it to learn task the first time?
- **Efficiency:**
 - How quickly can tasks be done (post-learning)?
- **Memorability:**
 - How easy is it to re-establish proficiency after being away?
- **Errors:**
 - How many errors do users make, how severe are these errors, and how easily can they recover from the errors?

HCI: Usability Components

- **Learnability:**
 - How easy is it to learn task the first time?
- **Efficiency:**
 - How quickly can tasks be done (post-learning)?
- **Memorability:**
 - How easy is it to re-establish proficiency after being away?
- **Errors:**
 - How many errors do users make, how severe are these errors, and how easily can they recover from the errors?
- **Satisfaction:**
 - How pleasant is it to use the design?

HCI: Usability Components

- **Learnability:**
 - How easy is it to learn task the first time?
- **Efficiency:**
 - How quickly can tasks be done (post-learning)?
- **Memorability:**
 - How easy is it to re-establish proficiency after being away?
- **Errors:**
 - How many errors do users make, how severe are these errors, and how easily can they recover from the errors?
- **Satisfaction:**
 - How pleasant is it to use the design?

Activity

Intro to HCI Activity

- **Answer on PrairieLearn Class Activity for today**

1. Think of a technological interaction from last week that irritated you.
2. Draw/visualize it (to the best of your ability)
3. Explain exactly HOW it failed for you. Depict activity, tasks, interactions.
4. Doors!

PLAIN DOOR

a.

LABELED DOOR

b.

HANDLE DOOR

c.

KNOB DOOR

d.

HINGE DOOR

e.

BAR DOOR

f.

PANEL DOOR

g.

GLASS DOOR

h.

Q: How does this door work?

- A. Push to the left
- B. Push to the right
- C. Pull on the left
- D. Pull on the right
- E. Slide it along

PLAIN DOOR

- ☐ Push ☐ Left side
- ☐ Pull ☐ right side
- ☐ slide it along

Q: How does this door work?

- A. Push to the left**
- B. Push to the right**
- C. Pull on the left
- D. Pull on the right
- E. Slide it along

PLAIN DOOR

- ☐ Push ☐ Left side
- ☐ Pull ☐ right side
- ☐ slide it along

Q: How does this door work?

- A. Push to the left
- B. Push to the right
- C. Pull on the left
- D. Pull on the right
- E. Slide it along

HANDLE DOOR

- ☐ Push ☐ Left side
- ☐ Pull ☐ right side
- ☐ Slide it along

Q: How does this door work?

- A. Push to the left
- B. Push to the right
- C. Pull on the left
- D. Pull on the right**
- E. Slide it along

Q: How does this door work?

- A. Push to the left
- B. Push to the right
- C. Pull on the left
- D. Pull on the right
- E. Slide it along

BAR DOOR

- ☐ Push ☐ Left side
- ☐ Pull ☐ right side
- ☐ Slide it along

Q: How does this door work?

- A. Push to the left
- B. Push to the right
- C. Pull on the left
- D. Pull on the right

E. Slide it along

BAR DOOR

- ☐ Push ☐ Left side
- ☐ Pull ☐ right side
- ☐ Slide it along

Learning Goals

What are Usability Heuristics?

What are Usability Heuristics?

What are Usability Heuristics?

What is Usability?

HCI: Usability

- Quality attribute
 - Assesses how easy user interfaces are to use
 - Improving ease-of-use during the design process
- Defined by 5 quality components

HCI: Usability Components

Recall

1. Learnability
2. Efficiency
3. Memorability
4. Errors
5. Satisfaction

What are Heuristics?

What is a Heuristic?

Practical method or guideline

- Used to facilitate
 - Problem-solving
 - Learning
 - Discovery
- Often referred to as a **"rule of thumb"**

Usability Heuristics

10 Usability Heuristics (Nielsen, 1993)

Visibility of
System Status

1

Match Between
System & Real World

2

User Control
And Freedom

3

Consistency
And Standards

4

Error
Prevention

5

Recognition
Rather Than Recall

6

Flexibility And
Efficiency of Use

7

Aesthetic And
Minimalistic Design

8

Help Users
With Errors

9

Help And
Documentation

10

1. Visibility of system status

- Keep users informed about what is going on
 - e.g., what page they are on and what part of a process
 - (# of steps left)
 - e.g., you are working in offline mode (connection lost) provide appropriate feedback
- About what system is doing, and how input is being interpreted

Example: Washroom door lock status

Feedback

Visibility of
System Status

1

- Does the user know what happened?
- Sending information back to the user about what has been done
- Includes sound, highlighting, animation and combinations of these
 - e.g. when screen button clicked on provides sound or red highlight feedback:

Previous → “ccclchhk”

Previous → Previous

Visibility of
System Status

1

Step 6/10

Set Your Password

In order to keep your account safe you need
to create a strong password.

PASSWORD

CONFIRM PASSWORD

YOUR PASSWORD MUST CONTAIN

- ☐ Between 8 and 20 characters
- ☐ 1 upper case letter
- ☐ 1 or more numbers
- ☐ 1 or more special character

Next Step

Step 6/10

Set Your Password

In order to keep your account safe you need
to create a strong password.

PASSWORD

CONFIRM PASSWORD

YOUR PASSWORD MUST CONTAIN

- ☒ Between 8 and 20 characters
- ☒ 1 upper case letter
- ☒ 1 or more numbers
- ☒ 1 or more special character

Next Step

Step 6/10

Set Your Password

In order to keep your account safe you need
to create a strong password.

PASSWORD

CONFIRM PASSWORD

YOUR PASSWORD MUST CONTAIN

- ☐ Between 8 and 20 characters
- ☐ 1 upper case letter
- ☐ 1 or more numbers
- ☐ 1 or more special character

Next Step

2. Match System + Real world

Match Between
System & Real World

2

- Terminology in user's language language from user's perspective
 - “you have bought...” VS “we have sold you...”
 - Use common words, not “techno-jargon”
- Error messages and feedback refer to user objects
- Avoid saying “you’ve entered an illegal input”

Match Between
System & Real World

2

3. User control + Freedom

User Control
And Freedom

3

- Easy to abort: cancel buttons
 - e.g., being able to cancel/undo order
- Easy to undo
 - e.g., being able to go back to previous step (s)
- Easy to make changes
 - e.g., removing items from a shopping cart
- Users (even *experts*) will make errors!

Example: User control + Freedom

User Control
And Freedom

3

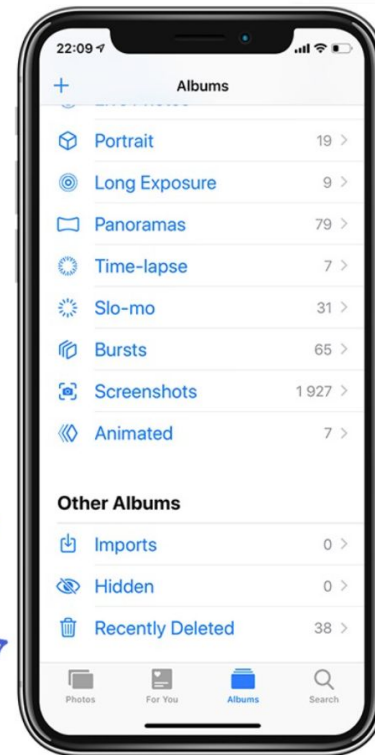

Undo the unwanted action.

Exit the navigation anytime.

Recover your accidentally deleted files.

4. Consistency + Standards

- Same commands always have the same effect
 - (e.g., ctrl+c)
- Locations for information, names of commands give the user a mental model of the system
- Size, location, colour, wording, function, sequencing
- Following standards helps
 - Web: use templates or css, style guides seems easy, but often not followed

Example: Google's Search bar

Consistency
And Standards

4

5. Error Prevention

- Constraints
 - Remove or gray-out illegal choices
- Auto-fill information from before
- Confirmation
 - Before making irreversible changes
 - Provide a way to "undo"
- Do not use colours to illustrate danger
 - Colour blindness / accessibility

Example: Alerts/Confirmation

Error
Prevention

5

It seems like you have forgotten to attach a file.

You wrote "are attached" in your message, but there are no files attached. Send anyway?

Cancel

OK
