

Physics 111 - Class 13B

Final Exam Logistics

Nov. 30, 2022

Class Outline

- Reminders
- Review of Teaching Pedagogy and Growth mindset
- Final Exam Format
- Student Experience of Teaching
- Suggestions for how to study for the Final Exam

Reminders

Reminders

- Today: Final Exam stuff
- Monday: Diagnostic (for bonus marks)
 - Part 1 (at the beginning of the term): +0.5%
 - Part 2 (at the end of the term): +0.5%
- Monday & Wednesday next week: Student hours from 8-9 AM
 - Bring your questions!
- Final Exam!

The last few classes...

Class Session	What we're doing
Wednesday Nov. 30th	Final Exam Logistics + Sample Problem
Friday Dec. 2nd	Test 5
Monday Dec 5th	Diagnostic Part 2: +0.5% on course grade! ATTEND CLASS TO GET BONUS!!
Wednesday Dec. 7th	Bonus Test 5

Assessing the 1st year physics program

Research Study

To improve physics teaching at UBCO, we are doing a two-part diagnostic to:

- help us stay current on what students know coming into the course
- understand the impact of different teaching methods
- assess the quality of the program
- understand how the program serves different populations

Your instructor (me) will not see the results until final exam grades have been submitted!

This diagnostic is NOT FOR MARKS!

You do NOT need to study as this is just a baseline for how you think.

Incentive: 0.5% per diagnostic

Diagnostic (Part 2) will happen in class next Monday (about 45 mins)

Problem Review Session

Problem Review Session	What we're doing	What you need to do
<p>Part 1 on Zoom Tuesday Dec 6th, 2022</p> <p>3:00 PM - 4:30 PM (will be recorded)</p> <p>Link on Canvas > Zoom</p>	<p>Topics from Weeks 1 - 7</p> <p>Math, Vectors, Kinematics, Forces, Application of Forces</p>	<p>On Ed Discussion, respond to the thread with question you would like me and the TAs to go over.</p> <p>Qs can be from Tests, HW, Tutorials, Textbook, Online, etc... but must be submitted in advance!</p>
<p>Part 2 on Zoom Thursday Dec 8th, 2022</p> <p>2:00 PM - 3:30 PM (will be recorded)</p> <p>Link on Canvas > Zoom</p>	<p>Topics from Week 8-13</p> <p>Energy, Momentum, Rotational Motion, Angular Momentum</p>	<p>Same as above!</p>

Review of Teaching Pedagogy and Growth mindset

Interleaved practice enhances memory and problem-solving ability in undergraduate physics

Abstract

We investigated whether continuously alternating between topics during practice, or interleaved practice, improves memory and the ability to solve problems in undergraduate physics. Over 8 weeks, students in two lecture sections of a university-level introductory physics course completed thrice-weekly homework assignments, each containing problems that were interleaved (i.e., alternating topics) or conventionally arranged (i.e., one topic practiced at a time). On two surprise criterial tests containing novel and more challenging problems, students recalled more relevant information and more frequently produced correct solutions after having engaged in interleaved practice (with observed median improvements of 50% on test 1 and 125% on test 2). Despite benefiting more from interleaved practice, students tended to rate the technique as more difficult and incorrectly believed that they learned less from it. Thus, in a domain that entails considerable amounts of problem-solving, replacing conventionally arranged with interleaved homework can (despite perceptions to the contrary) foster longer lasting and more generalizable learning.

Course Learning Outcomes

1. Introduce the conceptual framework of classical mechanics and confront any misconceptions you might hold (encouraging “Newtonian” thinking).
2. Explore the power and simplicity of effective model building.
3. Develop the following skills: proportional reasoning, dimensional analysis, physical reasoning, pictorial representations (free-body diagrams), reading for understanding (asking why is this true?), that are critical for every upper year science course.
4. Develop advanced problem-solving, written and verbal communication skills.
5. Nurture the development of graphical approaches to understanding areas and slopes.
6. Understand and appreciate the crucial role that experiment plays in the scientific method.
7. Show you that physics is everywhere, and excite you about its relevance to your area of study and life

Growth Mindset

What is mindset?

Mindsets are beliefs and perceptions about learning.

Fixed vs. Growth

- A fixed mindset is based on the belief that your qualities are carved in stone
- A growth mindset is based on the belief that your basic qualities are things you can cultivate through your **efforts**, your **strategies**, and **help from others**

By Nigel Holmes based on the work of Carol Dweck

Why does mindset matter?

Ropes and Blocks

Assume the three blocks portrayed in the figure move on a frictionless surface and a 35 N force acts as shown on block C. The masses of the blocks are as follows: $m_a = 18$ kg, $m_b = 10$ kg, $m_c = 17$ kg.

Note: The blocks are *NOT* drawn to scale, pay close attention to m_a , m_b , and m_c !

Part 1

Determine the acceleration of block C.

$a =$ number (rtol=0.05, atol=1e-08)

$\frac{m}{s^2}$

Part 2: Medium length numerical input problems

Part 3: Long worked problems (submit work)

Choose 5 of 8 problems

A frictionless ski jump is designed such that at the bottom of the hill, there is a short flat section; after the flat section, the slope continues into a ramp of vertical height 1.0 m angle 20° . The top of the ski slope is 5.0 m high.

An object of mass 20.0 kg sits at the flat section of the slope. A second object of mass 10.0 kg is released from the top of the slope so that it slides down and makes a perfectly elastic collision with the other object causing it to move up the ramp and undergoes projectile motion before landing some distance away from the ramp.

A) What is the speed of the (initially) stationary block after the collision ?

B) How far away from the ramp does the block end up after it goes off the ramp?

10% Reflection on Physics

10% Reflection
(like LLs)

Q1. What grade do you think you deserve on this exam? In 2-3 sentences, justify your choice.

Q1

10% Reflection on Physics

10% Reflection
(like LLs)

Q1

Q2

Q3

Q2: Think of one concept from this class that you found awesome, cool, or amazing.

Describe the concept briefly, explain it to someone who has never taken physics before and explain why you think that (3-5 sentences).

10% Reflection on Physics

Q3: As an educator, I am very aware that learning is not easily measured by scores on labs, tests, and exams. There are many other ways and sources of learning, and I admit that not everything can be captured by the assessments that I give you.

Pretend that there were no guidelines in the syllabus for calculating your final grade. Based on the work that you have done all semester, and the learning goals for the course, what grade (out of 100) do you think you have earned?

Here are the learning goals for this course: <See slide earlier about course learning goals>

Try NOT to focus on calculating your earned grade and avoid mentioning or referring to average grades on the labs, tests, homework, or even the posted grade with your grade before the final exam.

What is some other evidence of your learning? Consider not just what you have learned, but how much effort you put into the course (and whether that effort was productive or not), and honestly assess how much of the material you feel truly comfortable with.

Pretend that there were no guidelines in the syllabus for calculating your final grade. Based on the work that you have done all semester, and the learning goals for the course, what grade (out of 100) do you think you have earned and why? 5-7 sentences

10% Reflection
(like LLs)

Q1

Q2

Q3

Workflow

- You should aim to be at the exam room at least 10 minutes before the start of the exam.
- Once you arrive, your ID will be checked and you'll be randomly assigned a seat.
- You will also need to pick up an exam booklet for your answers to Part C.
 - You can use the booklet for your work on other problems also
- You will NOT be able to submit your work digitally (iPad, Tablet, picture, etc...), it MUST be on paper
- Once you submit your exam on PrairieLearn and your Work, you may leave.

Student Experience of Instruction (SEI)

Past Courses

I am a strong believer in transparency and openness so on this page, I will also be sharing my full teaching evaluations. This is definitely a moment of vulnerability as these are often considered private. However, I think that students should know exactly what they're walking into when they take my course. I am not the perfect instructor, and my teaching is constantly evolving. I also read and reflect upon every comment that I receive so also keep in mind these comments are from the past. I have definitely made mistakes in the past, and am always seeking to improve and better my teaching, as well as your learning.

Without further ado, my teaching evaluations from the past few terms (I will continue adding to this list as time permits):

- [Physics 111, Winter 2020 Term 1 \(Online\)](#)
- [Data 301, Winter 2020 Term 1 \(Online\)](#)

**You should have received an email that the
“Student Experience of Instruction” (SEI)
is now open for this course.**

**Research shows that SEI are flawed because
they are influenced by unconscious and
unintentional biases.**

Despite their flaws, SEIs are used by departments to:

- **Make decisions on Tenure and Promotion**
- **Decide which courses instructors teach**
- **Rate/rank grant applications and awards**

More important to me however, is how you felt about the course content, the structure, and me as an instructor.

I want to hear from you!

My goal is to get at least a 70% response rate on the SEI, the more the merrier!

PHYS 111 001 2022W1 Introductory Physics for the Physical Sciences I

Sample Problem

Sample Problem: Two blocks are stacked on top of each other. Block 1 ($m_1 = 1.0$ kg) rests on top of a larger Block 2 ($m_2 = 2.0$ kg). Block 1 is also tied to the wall with a rope.

If Block 2 is pulled to the right with a force of 20 N:

a) What is the tension T in the rope holding

b) What is the acceleration of Block 2?

**Suggestions for how to
study for the final exam**

- **Review all the tests and bonus tests!**
- **Review all the homework questions!**
 - **Try new variants! Your score won't change**
- **Do the Tutorial problems (posted on course website)**
- **Try HW 11**
- **Do all the weekly suggested practice questions from the textbook**
- **Do more conceptual questions from the back of each chapter**

See you on Friday for Test 5!
